Overview

About AI

AI have come and we freaking out, but not to worry because AI here to help us not to replace our job. This project shows AI can be used to help us in searching and analyze

Use E-Commerce

Shoping online can bring frustration when searching and find good product, this idea will help us

Technology Used :

Language:

Using JavaScript with JSX syntax for writing React components.

Plain CSS for styling.

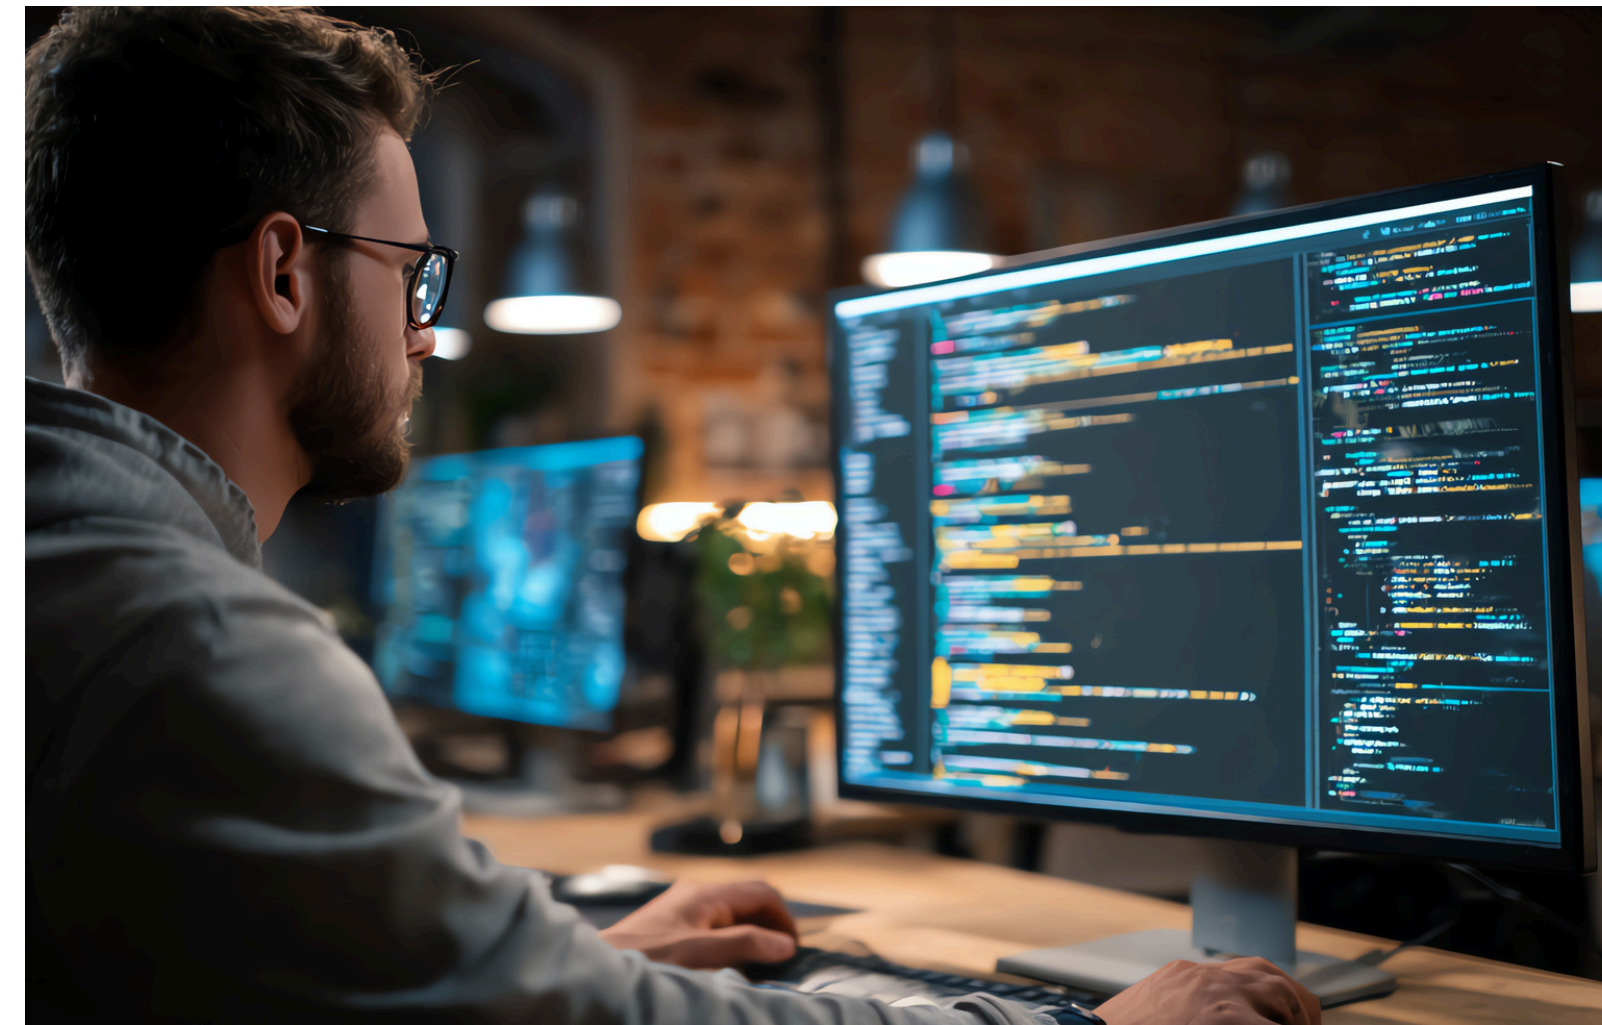

Framework/Library:

Using React framework as the core for building the frontend interface.

AI/Chat Integration:

Calls API to give input and receive output as message text.

AI uses Groq as default (I provide the API (yes, this should be kept secret, but I give it anyway)) and can be changed to whatever you like to use (but you need to change some code).

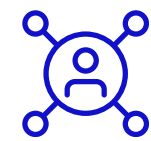

Features :

- Talk to AI as an assistant in finding products.
- User and seller have different accounts
- Sellers can add products.
- AI provide explanations and give comparisons between products.
- Discount listing

AI Suport Explanation :

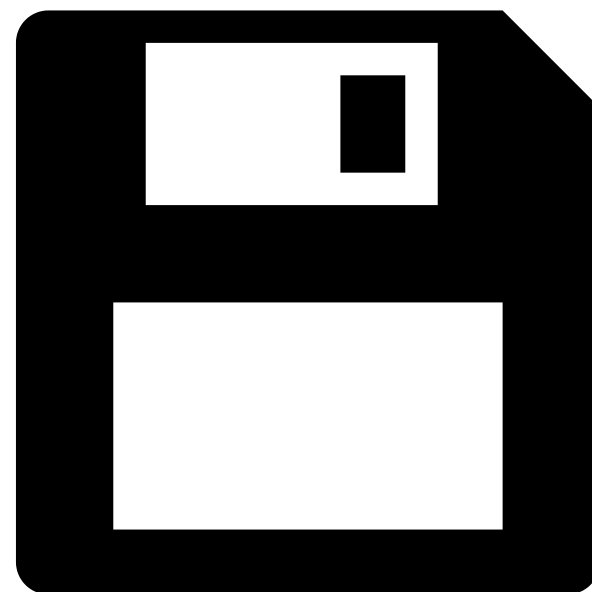

How to Chat?

At the bottom, you can click on AI, and it will bring you to the chat box on the right side of the screen.

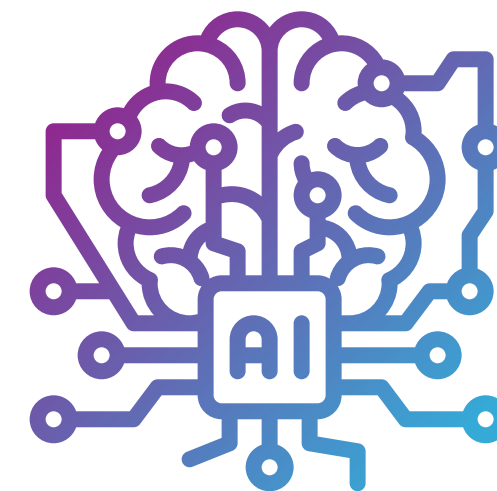

Save Conversation?

When closed, the chat will remain unless reloaded.

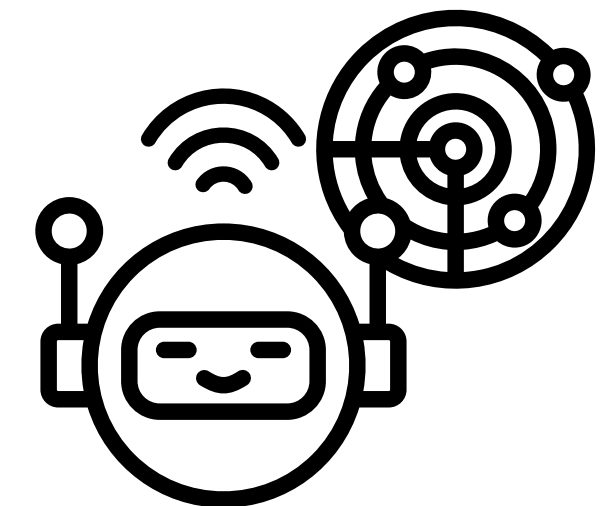

Limited?

You can ask anything and have no limitation within the website.

Agent?

AI has no access to products due to bad product placement and needs to be told what products are available to proceed with giving recommendations.
